V_{so}	73 KIAS	62 KIAS	11 kts
V_{ref}	95 KIAS	81 KIAS	14 kts

About MICRO Vortex Generators:

The **MICRO Vortex Generators** for the Baron 55, A, B, C, D, and E are FAA STC approved and ready for installation on your airplane. This jet age technology provides virtual elimination of V_{mc} , a dramatic improvement in characteristics, reduced stall speeds, reduced accelerate/stop distance, and improved safety.

The **Micro VG Kit** consists of 106 vortex generators mounted on the wings, just aft of the boot line and on both sides of the rudder, plus two strakes on the outside of the engine nacelles. The **Micro VG Kit** includes all of the installation tools and materials for your shop to make the easy one day installation.

The **Micro Vortex Generators** are manufactured under our FAA PMA from aircraft grade aluminum and are alodined to a Boeing mil-spec, then painted to match your airplane before shipping.

As one twin owner said, "The **Micro VGs** do everything you said they would do and more -- the tail of my airplane thinks it's four feet taller and the rudder thinks it's two feet longer!"

When placing your order for a **Micro VG Kit**, please provide the Serial Number and N-Number. We can ship the same day if your kit is ordered Alodine, ready to be painted. We can paint the VGs to match your airplane for an additional \$200 per color. Painted kits will ship within 3 days. Amex, VISA, MasterCard, Discover and COD orders accepted. Please call for further

- **VGs mounted on both sides of the rudder!**
- **Strakes on both engine nacelles!**
- **Reduced V_{mc} , V_s , V_{so}**
- **Easy One Day Installation**
- **Improved Characteristics**
- **Improved Controllability**
- **Kit Price \$2450 plus S&H**
