

CESSNA 170A, 170B

MICRO Vortex Generator Kit

About MICRO Vortex Generators

The **MICRO Vortex Generators** for the Cessna 170A, 170B are now FAA STC approved and ready for installation on your airplane. This jet age technology provides an 10% reduction in stall speed, improved aileron response, reduced landing and takeoff roll.

When Dick Britton CFI flew the C170B first time with Micro VGs he said, "With a tail dragger there are (5) steps for takeoff":

- 1.) stick forward to get the tail up, and then
- 2.) directional control,
- 3.) directional control,
- 4.) directional control,
- 5.) lift off!

With Micro VGs on the C170B steps 2,3,4 are just about eliminated.

The **Micro VG Kit** consists of 80 Vortex Generators mounted on the wings, just aft of the leading edge and 36 Vortex Generators mounted on the underside of the horizontal stabilizer. Included are installation tools, detailed drawings and instructions, templates for positioning VGs, spares, Loctite Depend adhesive and all the materials needed for the easy one day installation.

The **Micro Vortex Generators** are manufactured under our FAA PMA from aircraft grade 6063-T6 aluminum, alodined to a Boeing mil-spec, ready for painting. Each VG is curved on the bottom to fit the contour of the wing.

When placing your order for a **Micro VG Kit**, please provide the Serial Number and N-Number. We can ship the same day if your kit is ordered Alodine, ready to be painted. We can paint the VGs to match your airplane for an additional \$200 per color. Painted kits will ship within 3 days. Amex, VISA, MasterCard, Discover and COD orders accepted. Please call for further information.

- **Reduced STALL SPEED 10%!**
- **Improved Characteristics**
- **Improved Controllability**
- **FAA STC Approved**
- **Easy One Day Installation**
- **Complete Kit**
- **Kit Price \$1450 plus S&H**
