

MURPHY REBEL

MICRO Vortex Generator Kit

About MICRO Vortex Generators

The **MICRO Vortex Generators** for the Murphy Rebel are now ready for installation on your airplane. This jet age technology provides a reduction in stall speed, and reduced landing and takeoff roll. These are the same Micro VGs now flying on hundreds of Cubs, Champs, Maules; and on the competition Cubs that won first place in the short takeoff and landing contests in Alaska, Montana, and California.

The **Micro VG Kit** consists of 64 Vortex Generators mounted on the wings, just aft of the leading edge and 20 Vortex Generators mounted on the underside of the horizontal stabilizer. Included are installation tools, detailed drawings and instructions, templates for positioning VGs, spares, Loctite Depend adhesive and all the materials needed for the easy one day installation.

The **Micro Vortex Generators** are manufactured under our FAA PMA from aircraft grade 6063-T6 aluminum, alodined to a Boeing mil-spec, ready for painting.

When placing your order for a **Micro VG Kit**, please provide the Serial Number and N-Number. We can ship the same day if your kit is ordered Alodine, ready to be painted. We can paint the VGs to match your airplane for an additional \$200 per color. Painted kits will ship within 3 days. Amex, VISA, MasterCard, Discover and COD orders accepted. Please call for further information.

- Shorter Takeoff
- Reduced Stall Speed!
- Easy One Day Installation
- Improved Characteristics
- Complete Kit
- Kit Price \$395 plus S&H
