<b>V<sub>mc</sub></b>	80 mph IAS	72 mph IAS	8 mph
<b>V<sub>s</sub></b>	71 mph IAS	62 mph IAS	9 mph
<b>V<sub>so</sub></b>	62 mph IAS	59 mph IAS	3 mph

### About MICRO Vortex Generators:

The **MICRO Vortex Generators** for the Piper Aztec are now FAA STC approved and ready for installation on your airplane. This jet age technology provides virtual elimination of V<sub>mc</sub>, a dramatic improvement in characteristics, reduced stall speeds, and improved safety.

The **Micro VG Kit** consists of 90 vortex generators mounted on the wings, just aft of the boot line and on both sides of the vertical stabilizer. The **Micro VG Kit** includes all of the installation tools and materials for your shop to make the easy one day installation.

The **Micro Vortex Generators** are manufactured under our FAA PMA from aircraft grade aluminum and are alodined to a Boeing mil-spec, then painted to match your airplane before shipping.

As one twin owner said, "The **Micro VGs** do everything you said they would do and more -- the tail of my airplane thinks it's four feet taller and the rudder thinks it's two feet longer!"

When placing your order for a **Micro VG Kit**, please provide the Serial Number and N-Number. We can ship the same day if your kit is ordered Alodine, ready to be painted. We can paint the VGs to match your airplane for an additional \$200 per color. Painted kits will ship within 3 days. Amex, VISA, MasterCard, Discover and COD orders accepted. Please call for further

- Reduced V<sub>mc</sub>, V<sub>s</sub>, V<sub>so</sub>
- FAA STC Approved
- Easy One Day Installation
- Improved Characteristics
- Kit Price \$1950 plus S&H
