- Reduces operating costs
- NO MORE DUAL MAG!
- Removable vac pump seal block
- You can convert one engine at a time
- Uses same prop and cowlings
- Eliminates hidden engine damage due to timing drift
- Improves starter motor and vibrator life

About MICRO J2B Conversion Kit

The **MICRO J2B Conversion Kit** contains the STC to convert your aircraft from (L) TIO-540-J2BD to (L) TIO-540J2B engines as Piper did with the T1020. This STC unlike other engine conversions can be carried out one engine at a time and does not require costly propeller changes or cowling modifications. Piper mixture control bracket P/N 41368-00 required not included. Simply order your factory J2B and our STC and install.

When placing your order for a **MICRO J2B Conversion Kit**, please provide the aircraft serial number, registration number and engine position. VISA, MasterCard, American Express, Discover and COD orders accepted. Please call for further information.
